PROFESSIONAL SUMMARY

Results-driven IT graduate specializing in core software engineering, object-oriented design, and secure database solutions. Possesses strong technical proficiency in Python, C, and relational databases alongside hands-on familiarity with machine learning workflows and automated testing. Recognized for delivering high-quality programming assignments within strict timeframes and bridging communication gaps via dual-language translation capabilities. Target roles include Associate Software Engineer, QA Automation Engineer, or System Analyst.

TECHNICAL SKILLS

Languages & Frameworks:	Python, C, SQL (Structured Query Language), Core Java, HTML5, CSS3
Databases & Formats:	MySQL Server, SQLite, Database Normalization, HDF Structured Storage
Tools & Methodologies:	Git, GitHub, VS Code, Software Development Life Cycle (SDLC), Unit Testing
Vulnerability & Security:	Input Sanitization, Basic Penetration Testing, Secure Coding in C, Access Controls
Professional Competencies:	Agile Task Allocation, Project Documentation, Written & Verbal Communication (English, Gujarati)

ACADEMIC & TECHNICAL PROJECTS

Automated Security Testing Framework	Academic Term Project
- Engineered a local laboratory framework utilizing Python to simulate and trace intentional SQL injection flaws to evaluate software robustness. - Authored parameterized database entry functions using multi-variable inputs in C, reducing improper queries by implementing custom type constraints. - Utilized advanced dictionary comprehensions to optimize lookup tables and map configuration settings dynamically across software modules.	
Scalable Image Pipeline Data Manager	Independent Initiative
- Developed a clean backend Python architecture using the Hierarchical Data Format (HDF) to serialize, partition, and read high-volume raw digital matrix chunks efficiently. - Automated synthetic file generation rules to evaluate multi-threaded file parsing speeds, facilitating smooth integration with simulated computer vision layers. - Maintained clean version-controlled structures using Git branches to support simultaneous feature updates and systematic code verification.	

EDUCATION

Bachelor of Computer Applications (BCA)	Graduation: May 2026
<i>Bhavnagar University, Bhavnagar, Gujarat — Major Aggregate: 82%</i>	
Core Focus Areas: Relational Database Management Systems (RDBMS), Object-Oriented Analysis & Design, Data Structures using C, Operating Systems Fundamentals, Network Architecture.	

LEADERSHIP & CERTIFICATIONS

- **Certification:** SQL & Relational Database Design Bootcamp – Skillshare (2025)
- **Timeline Execution:** Spearheaded group assignments utilizing a rigorous 90-day pipeline system to divide development milestones, enforce strict tracking routines, and hit every final launch date.
- **Localization & Drafting Support:** Selected by faculty to interpret, translate, and verify technical syllabus items and administrative guidelines from English to Gujarati, ensuring absolute contextual precision.
